

LITHIUM X

FORWARD LOOKING STATEMENTS AND DISCLAIMERS

This Presentation includes and is based on forward-looking information and statements that are subject to risks and uncertainties that could cause actual results to differ. Factors that might cause or contribute to such differences include, but are not limited to, economic conditions globally, the impact of competition, political and economic developments in the countries in which the Company operates, regulatory developments domestically and internationally and changes in lithium prices and in the margins for the Company's products. These expectations, estimates and projections are generally identifiable by statements containing words such as "expects", "anticipates", "targets", "goals", "projects", "intends", "plans", "believes", "seeks", "estimates", variations of such words, and similar expressions. Important factors that could cause actual results to differ materially from those expectations include, among others, economic and market conditions in the geographic areas and industries that are or will be major markets for the Company's businesses, lithium prices, market acceptance of new products and services, changes in governmental regulations, interest rates, fluctuations in currency exchange rates and such other factors as may be discussed from time to time. Although the Company believes that its expectations and the information in this Presentation were based upon reasonable assumptions at the time when they were made, it can give no assurance that those expectations will be achieved or that the actual results will be as set out in this Presentation. The Company is not making any representation or warranty, expressed or implied, as to the accuracy, reliability or completeness of the information in the Presentation, and neither the Company nor any of its directors, officers or employees will have any liability to the reader or any other persons resulting from the reader's use of the information in the Presentation. The Company undertakes no obligation to publicly update or revise any forward-looking information or statements in the Presentation. The reader should consult any further disclosures the Company may make in documents it files with the applicable securities regulators.

The Presentation is intended for educational and informational purposes only and does not replace independent professional judgment. Statements of fact and opinions expressed are those of the participants individually. The information is not designed to provide financial, tax planning, accounting, investment, business or legal advice, in any way whatsoever. The reader should consult with a lawyer, accountant and other professionals in respect of contents hereof. Furthermore, the information in no way should be construed or interpreted as, or as a part of, an offering or solicitation of securities. Investors are advised to discuss any trading with a registered securities broker or personal finance professional prior to investing.

The Company cautions that the Sal de Los Angeles project has not been the subject of a feasibility study and there is no guarantee the proposed pilot ponding facility referred to herein will successfully produce a commercial product on a profitable basis or at all. There is a significant risk that production from the pilot facility will not be profitable, and the risks are even greater given that no feasibility study has been prepared. The Company has not established the economic viability of the proposed operation or any mineral reserves that would support the same. The purpose of the pilot program is not to commence commercial production but to utilize the expertise and experience of the Company's joint venture partner, Salta Exploraciones SA ("**SESA**") using brine from an existing free flowing artesian well which will contribute initial brine to the pilot ponding facility. SESA is a consortium of Argentina based engineering and construction firms with extensive experience in the design, construction and operation of lithium brine facilities in Argentina's Puna region, where the Project is located.

References to resources on Sal de Los Angeles Project described herein are based on Technical Report: Resource Estimate for Lithium and Potassium; Sal de los Angeles Project, Salta, Argentina, dated February 24, 2017 was prepared and signed by Frederik Reidel, CPG.

References to resources on Clayton Valley Project described herein are based on Technical Report: Inferred Resource Estimate for Lithium, Clayton Valley South Project, Clayton Valley, Esmeralda County, Nevada, USA", for Pure Energy Minerals, Ltd., is dated July 17th, 2015.

The technical information contained in this presentation has been reviewed and approved by William Randall, P.Geo, who is a Qualified Person as defined under NI 43-101. As Vice-President Project Development of the Company, Mr. Randall is not considered independent.

A South American lithium brine focused exploration and development company with the vision and resources to become a significant upstream supplier in the battery revolution

ASSETS

Sal de Los Angeles (SDLA) is Lithium X's flagship asset located in Salta Province, Argentina covers 95% of Salar de Diablillos.

- Fully permitted initial ponding facility with a target initial output of **2,500 tonnes/year LCE***
- Sample product already being tested by potential customers
- **Feasibility Study** on a 20,000 tonnes/year LCE operation underway and expected completion **Q4 2017**
- Lithium X plans to use the **Atacama process**, perfected by its own executives

Lithium X will become the **largest shareholder of Pure Energy Minerals**, with an agreement to acquire 19.99%, as Pure Energy develops a large land package in Clayton Valley, Nevada **surrounding Albemarle's Silver Peak lithium brine mine**

TEAM

Lithium X has assembled a team of **top financial and technical talent** with a track record of success to execute its strategy

Lithium X has no debt and has engaged **strategic partners and a staged development approach** to minimize capital requirements and reduce execution risk

*the Sal de Los Angeles project has not been the subject of a feasibility study and there is no guarantee the proposed pilot ponding facility will successfully produce a commercial product on a profitable basis or at all.

Lithium X is very proud to be recognized in the 2017 TSX Venture 50® as the Mining Sector's Top Performing Company last year

typical hybrid car
-  **44 pounds (>11X)**
typical electric car
-  **112 pounds (>1.5X)**
Tesla 85-KWH Model

INVESTOR DILEMMA

Lithium is not commoditized – there is a lack of investment vehicles that give pure play exposure to the growth of the lithium market therefore competition for capital is low:

1. THE BIG THREE PRODUCERS are large cap, diversified chemical companies with only a small portion of revenue generated from lithium

LITHIUM X BRINE ASSETS

"We believe brines will reclaim market share after 2018 and **spodumene pricing will be linked to the marginal cost of a brine asset** producing lithium carbonate, not the other way around."

Deutsche Bank

Clayton Valley, NV

- LIX has an agreement to acquire **19.99% of Pure Energy**
- Combined land package of approx. 26,400 acres **surrounding Albemarle's Silver Peak mine**

4%
■ CLAYTON VALLEY, NV

Sal de Los Angeles

- NI 43-101 resource of **1.04M MT LCE Indicated, 1.01M MT LCE Inferred**
- High grade 501 mg/l Li
- Low Mg/Li ratio of 3.8
- **Construction permits received** on Initial Ponding Facility*

42%
■ CHILE
■ ARGENTINA

Salar de Arizaro

- 33,846 hectare project, fully staked
- Located in Salta, same province as SDLA
- One of the worlds largest salt lakes
- Historical sampling shows elevated Li values and favorable geochemistry

*The Project has not been the subject of a feasibility study and there is no guarantee the ponding facility will successfully produce a commercial product on a profitable basis or at all.

ARGENTINA'S PUSH

Argentine lithium production (k tons, LCE)

Source: USGS, HSBC estimates

President Macri's Reform:

Elimination of the 5% mineral export tax

Unblocked Argentina from international capital markets by settling a long standing dispute with US-based bond investors with respect to its 2001 government bond default

Launched a **\$16.5bn bond issuance**, the largest ever in emerging markets

Paul Matysek has worked extensively in Argentina having **advanced two projects to the point of sale:**

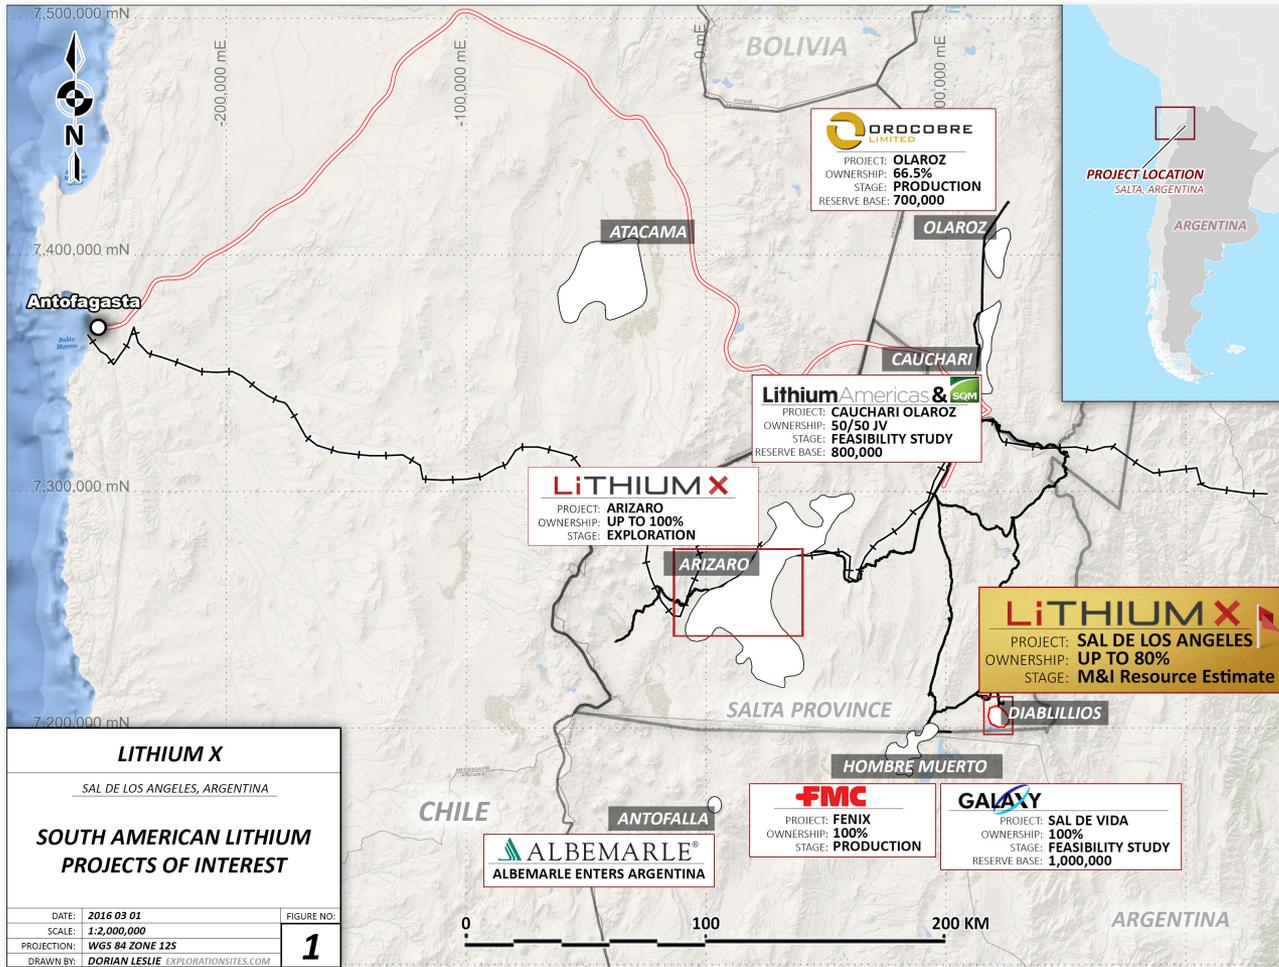

HSBC expects production in Argentina to increase by **68k tons by 2025 from 2016 levels**

HSBC estimates Argentina will **contribute 17% of 2016 global supply** that should increase **to 23% by 2025**

President Mauricio Marci has **removed the 5% tax on lithium exports** and is trying to improve the regulatory structure of lithium industry

HSBC expect **Chile's share in global production to be 35% in 2016 but decline to 18% by 2025** given increase in Argentine, Australian and Canadian supply

LITHIUM X ARGENTINE PROJECTS

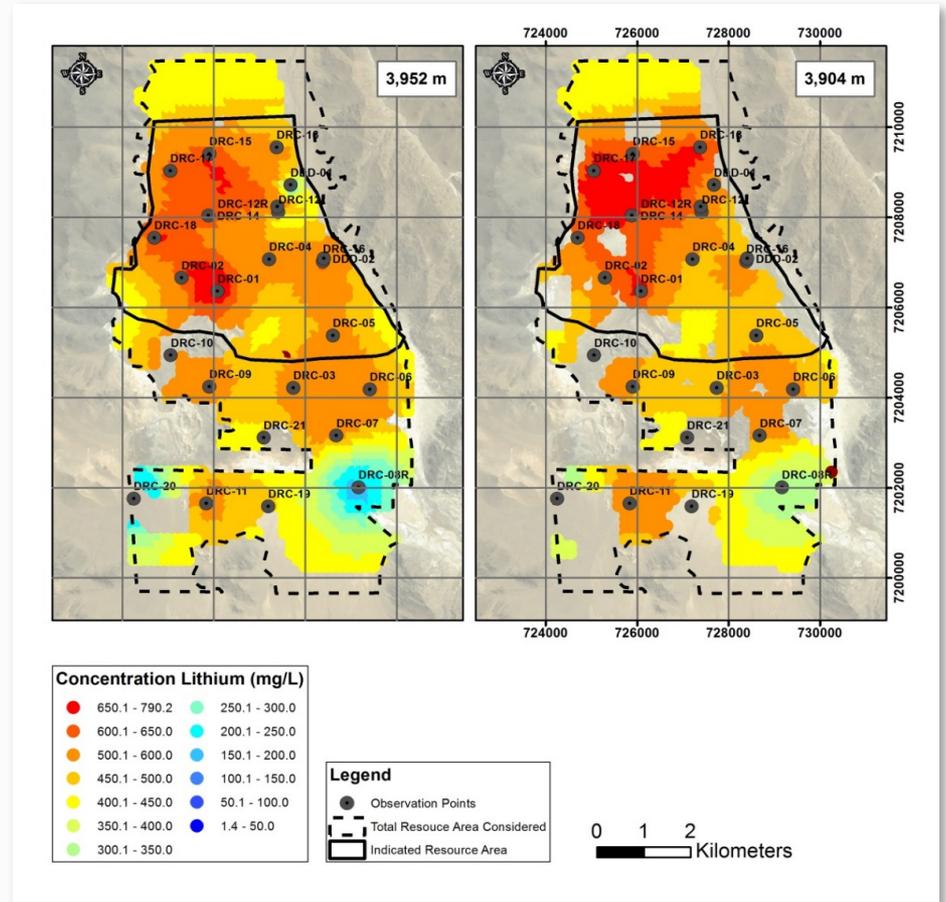

*the Sal de Los Angeles project has not been the subject of a feasibility study and there is no guarantee the proposed pilot ponding facility will successfully produce a commercial product on a profitable basis or at all.

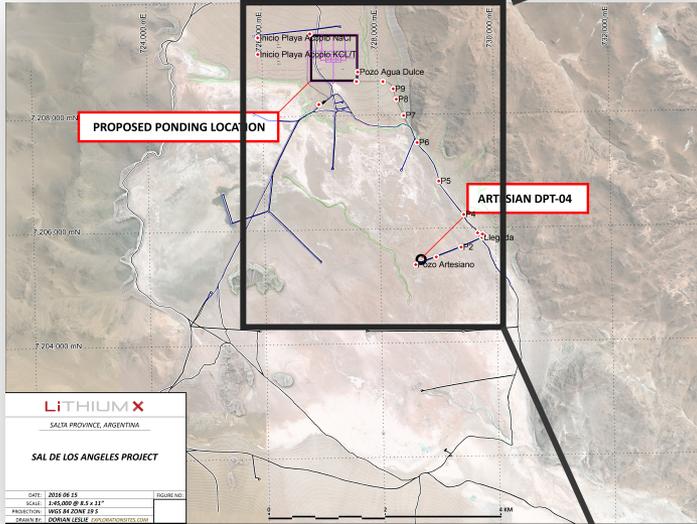

SAL DE LOS ANGELES

Large Resource with High Grade Core

- Approximately **C\$20M invested** in work on the property between 2010 to 2017
- NI 43-101 resource of **1.04 million tonnes lithium carbonate equivalent (LCE) indicated** and **1.01 million tonnes LCE inferred**
- High grade brine of **501 mg/L Li average**
- Higher grade brine within Indicated resource (501 to 790 mg/l Li) will be focus of further testing for wellfield construction
- Low average magnesium to lithium ratio of 3.8
- Potential to expand resource by further drilling of northern claims

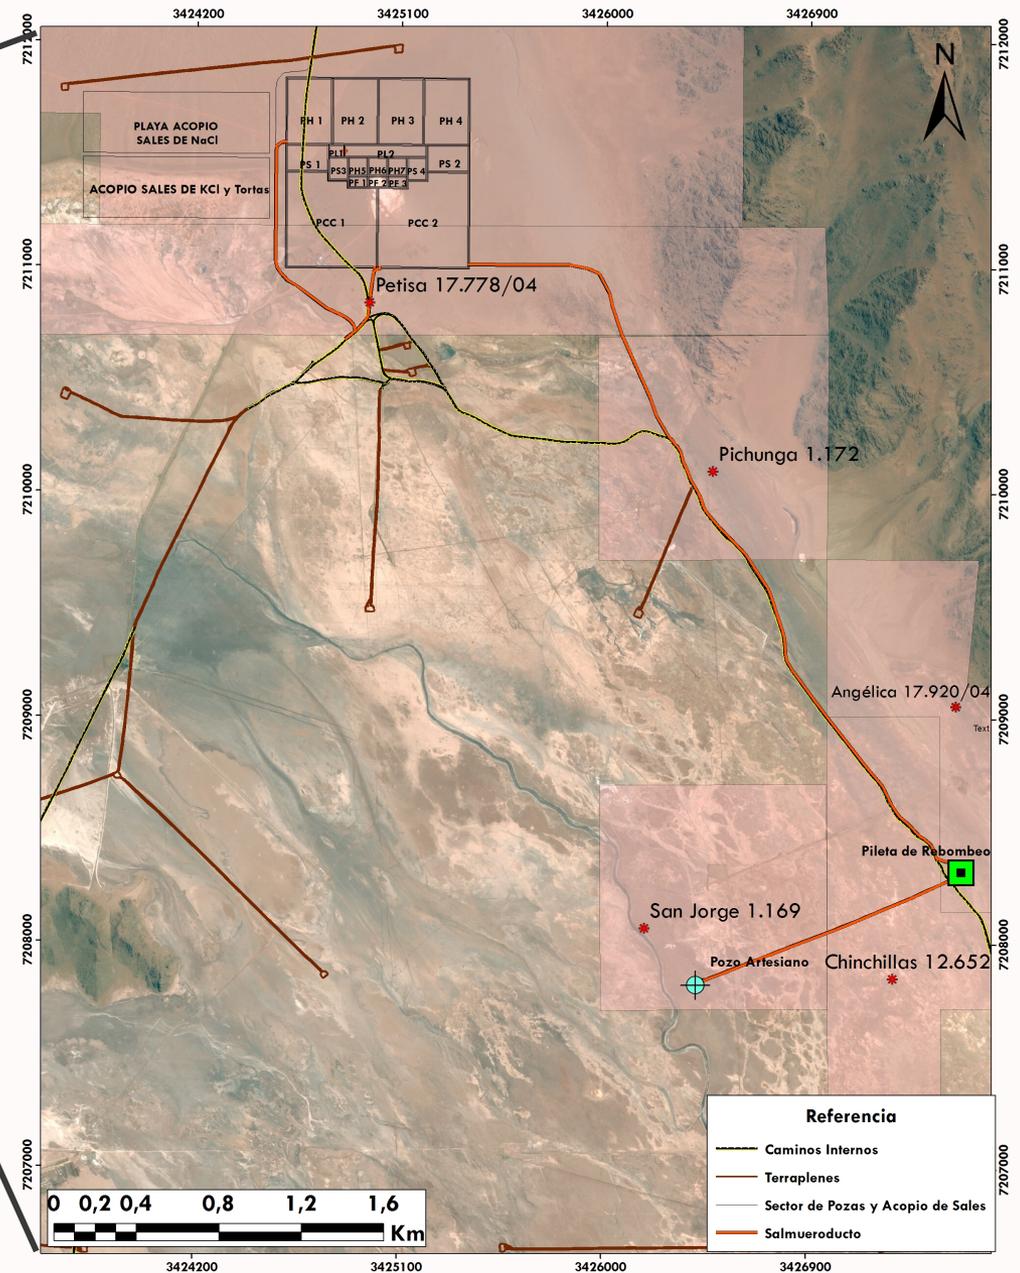

SESA INITIAL PONDING FACILITY

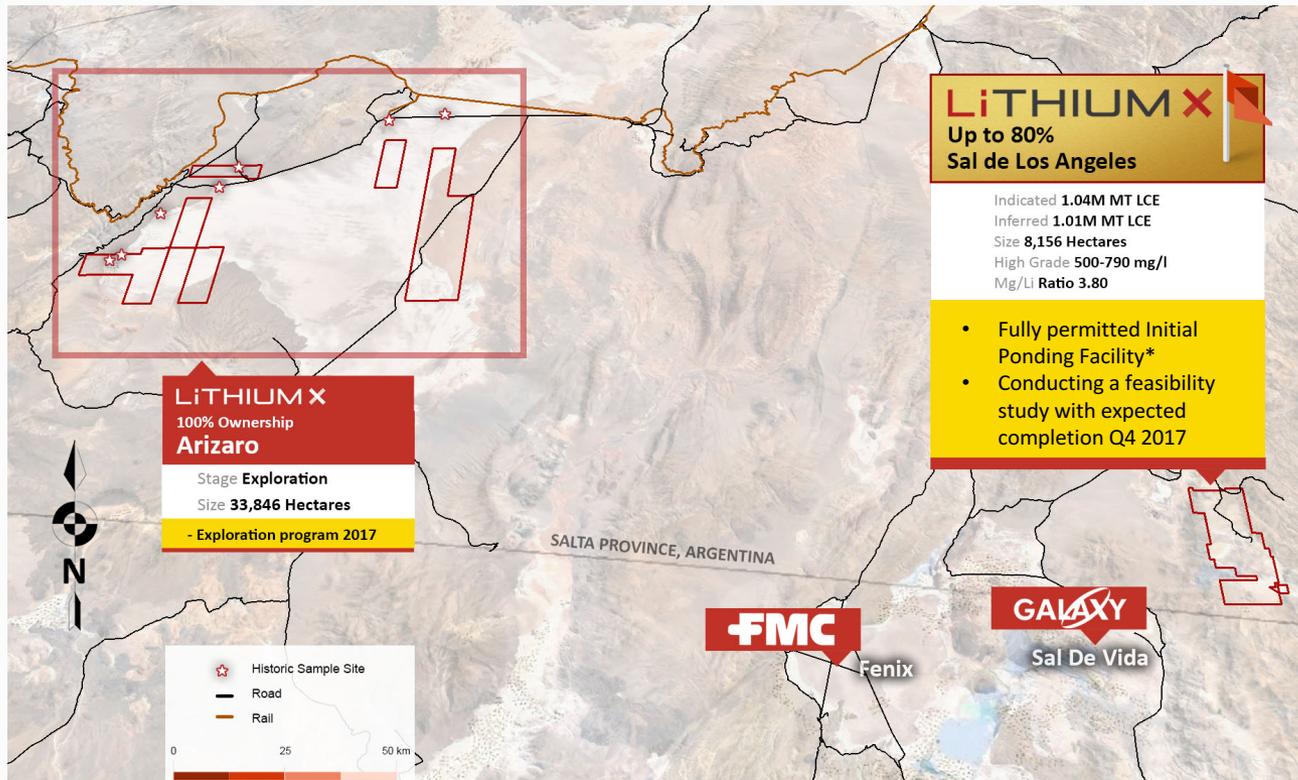

- **Fully permitted**
- Designed for initial **2,500 annual tonnes of lithium carbonate equivalent in 5% lithium chloride solution***
- **\$9.3M CAPEX - \$3.3M contributed by Lithium X and \$6M contributed by SESA**

*The Project has not been the subject of a feasibility study and there is no guarantee the pilot plant will successfully produce a commercial product on a profitable basis or at all.

ARIZARO PROJECT

33,846 hectares in one of the world's largest, least explored salar

- Historical sampling and values available from literature show the basin changes brine chemistry from east to west
- Certain portions of the salar appear to possess geochemical ratios that could enhance the evaporation path of many brines in the Puna region of Argentina
- Brine mixing to reduce reagent use, enhance economics and increase recovery is commonly used in brine operations

ARIZARO PROJECT

Geology & Brine

- The basin is composed of a predominantly halite core, similar to Hombre Muerto (FMC) , Rincon (Enirgi) and Atacama in Chile (SQM & Albermarle)
- Many known large salars host geochemically different brines (Atacama)
- LIX's Arizaro project conveniently covers two large portions of the salar, thought to offer different brine compositions
- Historical sampling shows highly anomalous lithium and potassium values in brine down to 96 metres below surface
- Other property owners in Arizaro include Eramet, Sentient and REMSA (Salta Government)
- Lithium X has the largest acreage position of any publicly traded company in Salar de Arizaro
- The area is set to be the focus of near term infrastructure upgrades as a result of the development of Taca-Taca (First Quantum) and Lindero (Fortuna Silver)

LIX operational team shall commence an exploration program
to assess the quantity and quality of the contained brine, as well as start work
of assessing the brine for use in mixing with other advanced operations

STRATEGICALLY LOCATED PROPERTY / CLAYTON VALLEY, NEVADA

ALBEMARLE'S SILVER PEAK BRINE EVAPORATION POND PROJECT

Strategic Partnership to Develop Nevada Lithium Asset

Lithium X's Nevada interests, when combined with Pure Energy's Clayton Valley South lithium brine project (having a 43-101 inferred mineral resource containing approximately 816,000 metric tonnes of lithium carbonate equivalent), will create a combined Clayton Valley project of approximately **26,300 acres surrounding Albemarle's Silver Peak mine.**

- Lithium X to become the **largest shareholder of Pure Energy** (market cap of \$50 million – May 12, 2017), with an agreement to acquire 19.99% and appoint one Board Member
- Pre-emptive right to maintain its interest in any future financing in Pure Energy
